

TAKE IT EASY

Hard work in cycling is right out of date. For science and Accles & Pollock have produced a wonderful steel that's both lighter and stronger than ordinary carbon steel. And what a difference it makes! With Kromo tubes and components (which are made from Chrome Molybdenum) there's less pushing, there's more speed, and there's longer life in your machine as well.

Keep up with the times—and your friends—on a cycle fitted with Kromo.
