DAYTON

49

The Dayton range for 1939 has been entirely redesigned. Taking for a basis the average demand during the past season, noticeable new features are the short wheelbase and low bracket positions. Sports machines are being produced in a variety of attractive flamboyant and enamel finishes, and concentration has been on the development of the lightweight side. Typical of these new machines is the No. 3 Continental. Built of "551" tubing, it is a fast and lively mount. A full selection of racing, touring, and roadster models will be shown.
