Corvette

Up-to-the-minute! De-luxe! Fully Equipped!

Abreast and ahead of the most modern moped design and practice, CORVETTE claims your special attention because it is **powered by the famous and well-proven Lavalette Engine with unique Automatic Clutch.**

CORVETTE is the ultimate in personal powered transport. It is not only a NEW moped. It is a NEW conception of mopeds which Hercules, with the widest National and International resources to call upon, are now in a position to market.

COMPACT DESIGN combines clean lines with functional practical advantages.

APPEARANCE is outstandingly pleasing, enhanced by ample Fairings giving an unusual degree of enclosure of power unit, transmissions and rear wheel. This enclosure, together with generous mud-guarding, gives maximum protection from dirt and oil — with resultant personal advantages to the rider as regards cleanliness of clothing and hands. This is important in these days when personal appearance is rated highly by moped riders, especially the Ladies.

Important as appearance may be — whether of rider or machine — the question of PERFORMANCE and EASE OF CONTROL must be paramount. It is in these respects that CORVETTE has unequalled advantages — see specification.

Out of the Blue comes

SPECIFICATION

ENGINE—49 c.c. LAVALETTE engine (single speed) with AUTOMATIC CLUTCH.

Hundreds of thousands have been proved in road service to be highly efficient and reliable. The engine runs on a 20 to 1 mixture of commercial-grade petrol and oil. Consumption is approximately 150/160 m.p.g. in normal circumstances.

Vital feature is the Automatic Clutch, which progressively engages when accelerating, and dis-engages when the engine is running at slow speed.

This dispenses entirely with manual clutch manipulation, the sole control being by the throttle. This leaves the left-hand free to operate the rear brake.

The Automatic Clutch greatly simplifies the operation of the moped, both for experienced riders and particularly for beginners.

The CORVETTE can be kick-started on its stand. Therefore initial pedalling is not essential.

By a simple ingenious device, the pedalling action can be freed from the engine drag in case of difficulty, and the machine used as a pedal bicycle with greater ease than is customary with mopeds.

FRAME—In accordance with finest moped engineering practice. Heavy gauge tubing.

WHEELS—23" x 2", giving low centre of gravity for safe road-holding.

TELESCOPIC FRONT FORKS—Providing smooth, comfortable riding and giving greater stability of steering and better road-holding than any other type.

BRAKES—Exceptionally efficient hand-operated 3½" internal expanding Hub Brakes, front and rear.

HANDLEBAR—Notably "clean" appearance achieved by means of 2-bolt attachment directly to top of telescopic front members.

PETROL TANK—1½ gallons, simplifying replenishment at Filling Stations.

POWERFUL LAMPS—Head Lamp, and Tail Lamp incorporating Prismatic Reflector for safety.

EQUIPMENT—FOOT PUMP, Electric Horn, Centre Stand, Rear Carrier, Saddle Bag and Tools. Number Plate, Licence Holder.

FINISH—Delightful Two-Tone contrasting pastel shades. Silver Birch Grey for Frame and Forks; Wedgewood Blue for Fairings and Guards. The Upper Engine Fairings are in polished Aluminium.

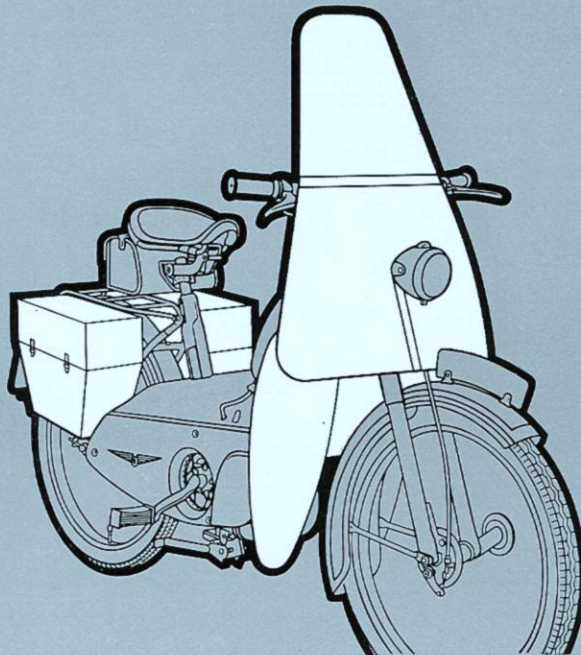

SERVICING—Whilst the CORVETTE in itself is an exciting new-comer, it embodies the already highly-proved Lavalette Engine Unit. Servicing requirements may therefore be expected to be at a minimum, but a well-equipped Servicing and Spare Parts Organization will be at the disposal of Owners.

ACCESSORIES FOR YOUR

Corvette

Amongst the Accessories available as extras from your Local Corvette Dealer are:

SPEEDOMETER
WINDSHIELD
LEGSHIELDS
PANNIER BAGS
