

Nobody makes mopeds like Yamaha.

To prove our point look at the new DT50M. It is a new style Yamaha moped that looks like a motorcycle and has many of the fine engineering qualities found in larger capacity Yamahas. The DT50M is a superbly compact on or off-road moped with typical Yamaha torque and reliability.

Just look at the features for yourself:-

Ultra reliable 2 stroke engine which utilizes Yamaha's Torque Induction reed valve system and produces more power at low engine speeds; a great asset with to-day's moped speed restrictions.

Easy to see and easy to operate instrumentation.

Hydraulic front forks and rear suspension.

Up-swept exhaust system.

Trials-type tyres.

Flexible 'Enduro' mudguards.

Handy tool kit for quick maintenance.

Rugged 5 speed gearbox.
