TECHNICS' BEST *

GRUBB'S "ALCYON"

MESSRS. GRUBB'S, of Brixton, are now kept very busy with orders for the range of Alcyon bicycles, the famous French machines for which Grubb's are the sole English agents.

Perhaps the most popular of the three particular models marketed—the Jean Aerts at £17 17s., the Tour de France at £13 10s., and the Diffusion at £10 10s—is the Tour de France.

Not only the racing men are becoming interested in Alcyon bicycles, but the tourist as well. The famous French thorough-breds have been designed to withstand the most severe road shocks, while at the same time losing none of their rigidity and responsiveness. These two points are essential to the tourists, and there is small wonder that more

and more are becoming used for the less strenuous side of cycling.

As a racing mount, however, none of the Alcyon range needs any introduction. For road-racing, either time trial or massed start, and for path work, they are

proving as successful in this country as they are on the Continent.

Particulars of any of the range can be obtained on application to Messrs. Grubb, Robsart-street, Brixton.
