**NEW 4-STROKE O.H.V. ENGINE FOR SUPER PERFORMANCE**

"It's a real all-round winner!" That's the enthusiastic verdict of famous T.T. rider John Surtees after thoroughly testing the new Dunkley S.65 Scooter. He awarded the Dunkley top marks for performance, economy, appearance — everything. These All-Star Points show you why this brilliant rider thinks so highly of the Dunkley Scooter. Its O.H.V. 4-stroke 65 c.c. engine gives more power per c.c., no 'whiskered' plugs, easy starting and longer life.

FEBRUARY, 1958

## An OHV 4-Stroke Scooter, the DUNKLEY 65 S

UNIQUE among the scooters on the British market, the new *Dunkley 65S* has an overhead valve four-stroke engine, 44 mm. x 42 mm. in a semi-open frame.

Motor cycle type wheels with full width hubs are carried in leading link front forks and swinging arm telescopically suspended rear, but the general lines and layout are in the scooter tradition with full height legshields, footboards and dualseat. The headlamp and horn are shrouded into the front forks and general appearance is very clean.

It is claimed that the OHV engine gives high performance coupled with good fuel economy and the whole machine offers remarkable value at under £100. Deliveries should commence in mid-February. The makers are: DUNKLEY MOTORS, LTD., NATIONAL WORKS, BATH ROAD, HOUNSLOW. HOUNSLOW 5459.

*specify*

**MOTOLLOY HUBS**

The excessive strain imposed by modern day conditions makes it essential that only the highest quality components are used in machines that earned their good reputation by consistent reliability and high performance—that is why Dunkley Motors and many other leading manufacturers specify B.H. Motoloy Hubs as standard equipment.

**THE BRITISH HUB CO. LTD.**  
**123 Northwood Street, BIRMINGHAM, 3**
