

From Sinclair...

Sinclair C5. A new power

- This is the remarkable Sinclair C5. Practical personal transport—powered by electricity. It's a world first. It needs no petrol, just an overnight charge from a mains socket. There's no gearchange, no clutch—press a button to start, squeeze a lever to stop.

Anyone fit to be on the roads can drive it, from the age of fourteen upwards. You need no licence, no helmet. You pay no road tax.

The power for 20 miles costs you less than 5p. Most remarkable of all is its price: just £399.

Above all, it's available now—in thousands a month. The revolution in production already, at the rate of one a month. The revolution in the way you travel has begun.

HOW TECHNOLOGY MADE A DREAM A REALITY

Electric vehicles for personal transport have been a designer's dream for decades. The Sinclair C5 is the first practical realization of that dream. Though the C5's battery is supremely efficient, delivering its full power in a dramatically different way from a normal car battery, the full weight of Sinclair technology has been deployed to revolutionise body design—ultimately, the secret of success.

The most valuable foundation a vehicle can have is a chassis—so the C5 uses a spinal steel chassis, developed in conjunction with Lotus Cars. But steel is not ideal for a vehicle body. It's heavy, and making it corrosion-resistant is expensive. So the C5's body is moulded in polypropylene—light, but tough, strong and making it corrosion-resistant.

So the C5's body does not corrode. Polypropylene is contained in the resilient. Polypropylene is contained in the bodywork, and a wipe restores the finish or fade: the colour is contained in the bodywork, and a wipe restores the finish. So why doesn't every vehicle use polypropylene? Because large mouldings of polypropylene are exceptionally difficult to make. The C5's body shell is the largest injection-moulded polypropylene assembly ever mass-produced. To produce one is a technical triumph—yet thousands of perfect C5s have been produced.

New tyre technology cuts rolling resistance. But once it's at speed, the aerodynamic shape of a vehicle is even more important than its weight.

The design of the C5's body has been tested and refined in a wind tunnel until it's as near perfect as it can be. Of course, an advanced vehicle needs much more than a strong chassis, a light body, and plenty of power. Every-thing about the C5 is the result of endless, painstaking research and development—even the wheels are reinforced nylon. A unique microchip monitors the motor, the driving load and the battery. The process protects the motor and the battery—and provides you with comprehensive

information through LED displays on your instrument pod. Even the steering is new. When you sit in a C5, your hands fall naturally to the steering bars, to give you full control in the most comfortable position.

- **The C5 and the law.** New government legislation in 1983 opened the way for the C5—a practical vehicle, with the highest permissible performance at the lowest possible price. The law allows anyone 14 or over to drive the C5—with no licence, tax, compulsory insurance or helmet. And safety organisations have welcomed a new, safe, exciting vehicle for young people.

- **The C5 and the future.** Electric vehicles are the vehicles of the future. The Sinclair C5 represents the state of the art now—and for some time to come. But the C5 is just the beginning... by the early 1990s, Sinclair will have on the roads a range of fast, quiet, astonishingly economical family vehicles. Order the first of the family—today.

- **Driving the Sinclair C5.** The C5's 20-mile range (40 miles with a spare battery) and built-in boot make it ideal for shopping trips... for getting to the station... even for suburban commuting. Everybody in the family can use it.

For parking on a gradient, the rear

brake lever locks. And for security, there's a key-operated ignition switch.

Technicalities aside, words can't quite describe the sheer fun of driving a C5.

The quiet electric motor buzzes you along - you feel secure, but exhilarated. It's like driving an open-top car, but with none of the noise.

It's unique. We can only suggest that you get one for yourself.

YOUR FAMILY will love that you may also very

THE C5 AND YOUR FAMILY

The C5 is such fun to drive that it's easy to find yourself forgetting that it's a car. The rear boot has enough room for groceries - and there's even a storage space for your commute.

The rear boot is a carrier bag of groceries. The C5's has an additional room on the C5's to double your room with a spare battery to double your range and cheap by train, the C5's 20-mile range and cheap power make it a natural for getting to the station. It's also an eye-catching way of getting to school or college - with room to spare for books and sports gear. The C5 is a resource for the whole family and it doesn't take long to see how many uses for it!

A fully-trained service engineer comes to your door! We've a special service arrangement with Hoover - famous for its at-home repair service.

HOW TO ORDER
The FREEPOST coupon

holders can appreciate you'll want to day, every day. Because we appreciate you, we aim to get you as soon as possible, within 14 days - 28 days or two months.

try your C5 as soon as possible. Because delivery by courier began two weeks before launch, so longer delays are unlikely—but if there's any possibility of delay, we won't debit your card or cash your cheque until shortly before delivery. Try your C5 for seven days. If you're disappointed, delighted—and exhilarated—we'll collect it and refund you. It's a 12-month charge-back guarantee.

Try your C5 for 12 months, not surprised, delighted – and let us know. We'll collect it and re-charge. The Sinclair C5 carries a 12-month guarantee, and comes with a rechargeable 12-volt battery and charger – all you need to get your C5 on the road. Use the coupon now. You could be the first round your block – in a C5!
