TEAGLE CYCLE MOTOR

MODEL C

The latest modifications are illustrated above and this machine will now be supplied against orders received, except for Ladies' Cycles, which will remain as illustrated in large brochure.

The Forked Handle is made of spring steel and allows the roller to follow the outline of cycle tyre precisely at any predetermined pressure desired.

This drive completely overcomes any discrepancy in roundness of cycle tyre and also overcomes slip in wet weather. This prevention of slip in all circumstances gives the tyre a very long life.

The transmission of Engine power by this type of roller drive is more efficient than by chains and it requires none of the adjustments that chains receive.

Also, please note the price for cash with order is £18. 12. 11, which includes Purchase Tax Net, but with maximum cash discount deducted.

Tools are 18/9 extra for cash with order.
